# Sprinkler Service Spring Preparation Instructions

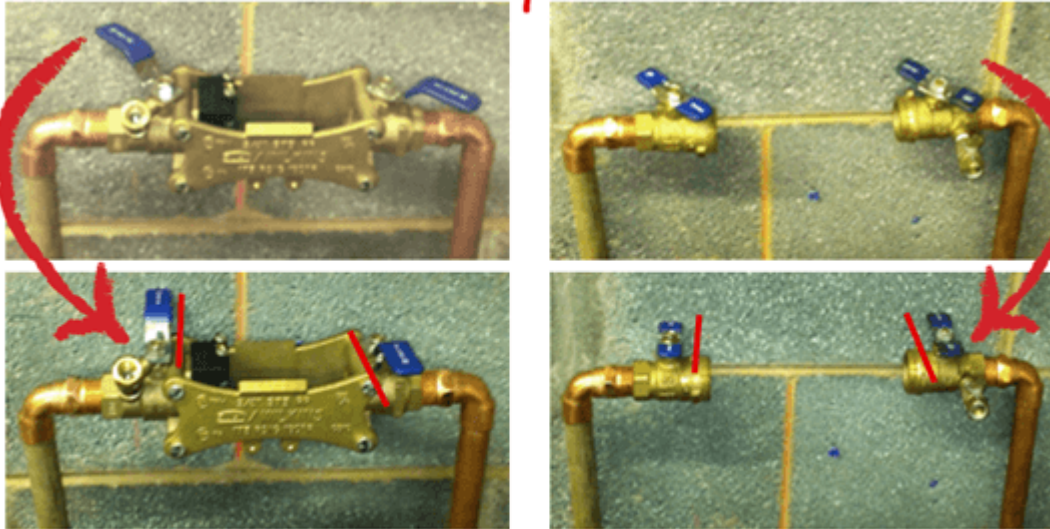

## Step One

### Important - If you have a basement plumbing tie-in:

For us to service your system, you must **CLOSE** this valve prior to your service appointment.

Here's what to look for and how to close your valve:

*Your outside ball valves may look like one of these two...*

*To close these valves, turn each handle until they are BOTH 90 degrees to the feed pipes...*

After closing the outside valves as shown in above photograph, turn on inside water supply in basement, slowly. You should hear the sound of water running briefly & then stop. If water continues to run, check ball valves outside to be sure they are properly closed.

## Step Two

**Backflow Device** – If applicable, leave your detachable backflow device at your front door so the technician can re-install it.
